Query Activity Log (Portal) (LAB-300-01A-01)

Part A: Create a Resource Group

A resource group contains the resources required to successfully deploy a in Azure. It is a container that holds related resources for an Azure solution.

In Azure, you logically group related resources such as storage accounts, virtual networks, and virtual machines (VMs) to deploy, manage, and maintain them as a single entity.

- 1. Sign in to the Azure portal
- 2. Go to the left side, Select Resource groups
- 3. Select Add
- 4. Enter the following values:
 - i. **Subscription**: Select your default Azure subscription
 - ii. **Resource group**: Enter a new resource group name myRG-300-01-01
 - iii. Region: Select an Azure location, (US) East US
 - iv. Select Review + Create
- 5. Select Create. It takes a few seconds to create a resource group.
- 6. Select Refresh from the top menu to refresh the resource group list, and then select the newly created resource group to open it. Or select Notification (the bell icon) from the top, and then select Go to resource group to open the newly created resource group

Part B: Create a Network Security Group

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group.

A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

- Go to the upper, left corner of the Azure portal, Select
 + Create a resource
- 2. Select Networking
- 3. Select Network security group
- 4. Enter the following values:
 - i. **Name:** Enter a new network security group name myDemoNSG01
 - ii. **Subscription**: Select your default Azure subscription
 - iii. **Resource group**: Select resource group myRG-300-01-01
 - iv. Location: Select an Azure location, (US) East US
 - v. Select Create
- 5. Select Notification (the bell icon) from the top, and then select Go to resource to open the newly created resource or go to the left side, select resource groups and click on myRG-300-01-01 to view newly created network security group myDemoNSG01

Part C: Query Activity Logs

- 1. To view the activity logs through the portal, select Monitor.
- 2. Select Activity Log.
- 3. You see a summary of recent operations. A default set of filters is applied to the operations.
- 4. To quickly run a pre-defined set of filters, select Quick Insights.

- 5. Select one of the options. For example, select Failed deployments to see errors from deployments.
- 6. Notice the filters have been changed to focus on deployment errors in the last 24 hours. Only operations that match the filters are displayed.
- 7. To focus on specific operations, change the filters or apply new ones. For example, the following image shows a new value for the Timespan and Resource type is set to storage accounts.
- 8. If you need to run the query again later, select Pin current filters.
- 9. Give the filter a name.
- 10.From the left side, click on **Dashboard**. The filter is available in the dashboard.
